### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: The prior art made of record in the attached form PTO-892 considered to be pertinent to the submitted application.

Ohm et al. US# 6,002,234 disclose a system of calculating optimum angle advance for brushless permanent magnet motor. Wherein the angle advance is calculated dynamically as a function of motor speed and wherein the reluctance torque is involved as function of motor current, and wherein operational variables include the motor speed and motor load.

Seibel US# 6,690,139 teaches use of induction motor system including a controller and d and q-axis current feedback loops. Wherein, the controller is receiving a frequency command signal and generating d and q-axis voltage command signals. A commissioning procedure to determine various motor parameters including increasing of motor speed based on percentage of increase in the electrical frequency.

However, none of the prior art teaches or suggests the motor controller with the combination of:

- A commissioning procedure during which at least one compensation angle is identified and when mathematically combined with the voltage phase angle, drives the motor to zero operating frequency when zero torque command is received,

- And during normal operation wherein when zero torque command received combining the compensation angle and voltage phase angle to generate a compensated phase angle and using the compensated phase angle to generate the modulating waveforms.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
